

**2022  
Santa Claus Utilities  
Water Quality  
Report**

**Mission Statement  
“Citizen Service”**

**To provide quality service on a consistent basis  
with economy and efficiency in mind.**

## **TOWN OF SANTA CLAUS WATER QUALITY REPORT 2022**

The Town of Santa Claus annual water quality report (CCR) will be available online on or before July 1, 2022 at [www.townofsantaclaus.com](http://www.townofsantaclaus.com). If you would prefer a paper copy of the 2022 Annual Water Quality Report (CCR) mailed to your home, please call (812)544-3329.

### **REPORT OVERVIEW**

It is the intent of this report to give water users important facts about the water we use daily. To ensure the safety of our water a partial listing of, the town's testing requirements are as follows: total chlorine, total coliform bacteria, lead and copper and asbestos fibers. Chlorine residual tests are run seven days per week. Total coliform tests are run four times per month to ensure that the disinfection (chlorinating) process is working. Lead and copper tests are run every three years to see if these two elements are showing up in our water. Another required test is asbestos fibers. The town utilizes asbestos cement pipe in a portion of the system, so we monitor the corrosiveness of the water to ensure the fibers are staying in place. Do not be alarmed when you hear that there is asbestos concrete pipe in the water system, it is considered safe and used worldwide.

Now that the town is producing water, there are and will be new testing requirements. Results of current testing are included in this report. Future testing requirements and results will also be included in this report.

During the last testing year, the town had no violations. Other constituents of our water are tested daily at our water treatment plant, as well as; at Patoka Lake Treatment Plant. Those results are also included in this report.

### **HEALTH INFORMATION**

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. Environmental Protection Agency (EPA) and Center for Disease Control (CDC) guidelines on appropriate means to lessen the risk from infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline at 800-426-4791.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also, come from gas stations, urban storm-water runoff and septic systems.

Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the EPA prescribes regulations that limit the number of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 800-426-4791.

### **CHLORAMINE/FLUORIDE ADDITION**

Patoka Lake Regional Water District, and the town utilize chloramines to disinfect your drinking water. For all normal users, chloraminated water is the same as water disinfected with chlorine. However, kidney dialysis patients should consult their doctor and fish owners should call your pet store for more information. As recommended by ADA and AWWA, Patoka Lake District, participates in the State Dental Fluoridation program and adds fluoride to the treated water.

You as an end consumer of water can help to protect the sources of drinking water by increasing and promoting efforts to recycle materials and properly dispose of chemicals, used oils and petroleum products, batteries, and other household refuse.

### **Statement Addressing Lead in Drinking Water:**

“If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Santa Claus Utilities is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.” Lead and copper testing is done every 3 years in accordance with required regulations.

If you have any questions about the quality of your water, please attend our Waterworks board meetings. The meetings are the second Tuesday of every month beginning at 6:00 CST at the Town Hall.

Our Public Water System Identification number is IN5274010. Listed are some important contacts you should have question concerning water quality:

Santa Claus Town Hall/Water Bills	812-937-2551
Russ Luthy, Utility Superintendent	812-544-3329
Water Department	812-544-2354
Patoka Lake Regional Office	800-313-5589

**Emergencies during weekends, holidays and after hours, call 812-686-2234** (Cell phone) or page personnel at 812-481-0370 (pager). All numbers listed will be a long-distance call. Please use only in emergencies.

### **Friendly Reminder:**

For billing questions call the Town Hall 812-937-2551 ext. #2

If your water is shut off for any reason, there will be a \$40.00 reconnect fee

### **Rates and Fees: Effective January 2018**

Water Connection \$750.00

Out of Town Limits applications (water only) \$ 125.00

Water Deposit \$150.00    Inspection- Residential. \$ 35.00

### **Fire Hydrant accessibility**

In 2020 while responding to a fire in CLV, the fire department had problems accessing and operating the nearest fire hydrant. The problem was due to landscaping and plantings that were blocking clear access to the hydrant. With the safety of all residents in mind, please keep an approximate ten-foot diameter clear area around hydrants in your yard.

### **Consumer Confidence Report**

available on-line

Every year since the early 2000's, the Santa Claus Water Utility has been distributing this water quality report to our customers. Hopefully the information has been engaging and helpful.

A lot of water has gone under the bridge-so to speak- since 2003. Way back then we were distributing paper copies of the report via the USPS.
